

General map of area and road leading to Coal Oil Point Natural Reserve and the Gray Whales Count project site...

From Santa Barbara, go north on 101 to Glen Annie/ Storke Road. Turn left and you are going south toward the ocean and away from the mountains. You will go past Marketplace with McDonalds, Home Depot, and Costco (and many others). Where Storke seems to end and the main flow turns left on El Colegio, you go straight through the light and the road veers right. You will see a sign that says West Campus Parking Permit Required at All Times. Believe it.

Keep going and stay right. The road is narrow and winding, but not too long. Devereaux Slough is on your right. (Don't make any turn-offs to the left.)

The road becomes dirt + gravel and you proceed a short distance into what opens to a parking area. Stay right and proceed to the gate (a steel bar across the road).

The top lock has combination numbers on the bottom. The combination is – **to be revealed** – Push in and release.

After going through the gate. Close it and lock it. Make the first turn to the right and park. Walk back out to the road and turn right and you will see two benches where we are set up.

Problems? call Michael: (805) 451-4600.

We enjoy free parking for this research effort. Spaces are limited, and you must park in the designated GWC parking area.

This is a nature reserve. No pets are allowed at any time (even in your car).

Put your GWC parking tag (to be provided) on your dashboard.

It is not a permit, but it does help with tracking usage; and it does inform authorities you are there doing permitted research.

Visit the Coal Oil Point Natural Reserve website for information, directions, and maps:

<http://coaloilpoint.ucnrs.org/directions.html>

Please note that your access is for permitted business only. Please do not park at the site for other purposes. Any violation of Coal Oil Point Reserve regulations jeopardizes the Gray Whales Count research project.
